

Guarding against system outage with an active/active approach

 **Industry:**
Media

 **Product:**
MOVEit Manged File Transfer

 **Solution:**
Managed File Transfer

HANDD
BUSINESS SOLUTIONS

THE CHALLENGE

A multinational television network needs to move multiple file types, including rich media content, securely and efficiently across the global organisation. Their unique content contains intellectual property which is the primary revenue generator for the company. This content is shown on live television and is also used collaboratively by partners as educational content. For these reasons, files need to be delivered securely and automatically around the clock with zero downtime.

THE SOLUTION

Progress MOVEit is a file transfer solution that allows the network to automate their file transfers and monitor them in real time. Powerful reporting tools provide detailed insights into their data transfers and allow all stakeholders the detail required to report against. Working with HANDD Business Solutions, the network recently upgraded their support package to take advantage of our 24/7 support desk, ensuring round-the-clock support for additional peace of mind for this business-critical installation.

THE BENEFITS

Introducing the Progress MOVEit file transfer solution gives the network greater confidence in their critical file transfers. Its active/active set up guarantees continuation of operations in the event of a system outage. File transfers are faster and safer, with data kept secure as it travels around the globe, and with an enhanced support package, expertise is on hand to identify critical performance issues and remedy them quickly – even when out of office hours.
